- 0501** Lawn, Cool Season, Low Input --
Bluegrass, Fescue, Ryegrass, Bentgrass
- 0502** Lawn, Warm Season, Low Input --
Bermudagrass, Bahisgrass, Zoysiagrass, Centipedegrass, St. Augustinegrass

This submittal form is designed for low fertilizer input lawn to protect the environment, especially for residences in the watersheds that feed into the Chesapeake Bay.

How To Take A Soil Sample

Soil Probe Auger Spade

1/4" soil slice

Each sample should represent only one soil type or area—for example, a lawn, vegetable garden or perennial landscaped area. If one area of your yard seems healthy and another has bare or yellow areas, sample healthy and unhealthy areas separately even if both are lawn grasses or flower gardens, etc. For each unique area, take at least six to eight samples. Mix soil cores for each sample in a clean, plastic bucket. If the bucket has been used to hold fertilizer or other chemicals, wash it thoroughly before using it for soil samples. Take the mixture in the bucket to fill a soil sample bag or a medium ziplock bag about two-thirds full. Use a ballpoint pen or water proof marker to label each sample bag and complete the soil submittal form. Samples should be shipped in a sturdy box.

To take a soil sample, use a soil-sampling probe, an auger, a spade or shovel. If a shovel or a spade is used, dig a V-shaped hole to sample depth (4-6"), then cut a thin slice as shown on the above
